

Long-term testing by the Bundeswehr (Federal Defense Force) has been successfully completed

Our ozone-resistant splatter protection material, RUTEC R1078 was subjected to a long-term experiment testing the self sealing properties-, ozone resistance, ricochet reaction and the endurance.

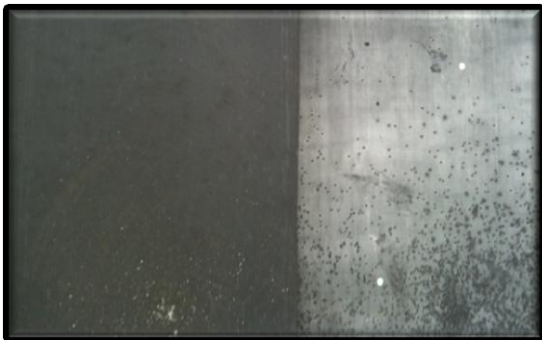

The test ended with very positive results, confirmed by the AG Schießstandbau Bundeswehr Hammelburg in a meeting on 04 May 2010.

The differences between our Rutec splatter curtain (left) and commercially available material (clearly visible on the right) is illustrated in the pictures.
